

# FARM PLANNING TOOL

**GENERATE A SUMMARY OF THE BIOPHYSICAL AND CLIMATIC CHARACTERISTICS OF ANY LAND IN PUERTO RICO, WHETHER IT IS A FOREST OR A FARM**

Get to know the land cover and soil types, floodability and elevation of the terrain, its geology and hydrography, average precipitation and temperature per month, and other geographic and climatic characteristics of any chosen terrain.

Access the tool at the [Farm Planning Tool Website](#).

**1**

Access the [website](#) and enter your terrain location in the "Write your address" box. You can also use the mouse buttons or the "+" and "-" signs on the map to zoom in and out.

**2**

Click on the polygon icon located to the right of the hand icon to mark your terrain with a polygon, as shown in the image. Click to place the points around the terrain. To close, you can double-click or click on the final point. You can also upload a KML file by clicking "Upload a KML" below the boxes where you place your contact information.

**3**

Fill in the fields with your information and click, "CREATE REPORT." An example of a section of the report is shown in the image. You will then receive an email with the report. Several boxes will appear with the data. You can check layers to display them on the map or download them in KML.

Interested in learning more about the tool? Do you need support to access or use it? Contact us at 787-360-9480 or send us an email to [caribbeanclimatehub@gmail.org](mailto:caribbeanclimatehub@gmail.org).
